Summary

Full-Stack Developer with nearly 5 years of experience building **event-driven**, data-intensive systems with **Node.js**, **PostgreSQL**, and **AWS**. On a **real-time user behavior analytics platform** for a US client, owned the **Salesforce-to-BigQuery integration service** end to end (**RabbitMQ**, **Redis**) and built two **LLM-powered features** for automated data enrichment and report analysis. Strong in production **distributed-systems** concerns: **idempotency**, **distributed locking**, **race conditions**, and **query optimization**.

Experience

Screen1 Technologies Nha Trang, Vietnam
Software Engineer Apr 2023 – Mar 2026

- Built **AI-Intent** and **AI-Insight** end to end, **from ReactJS frontend to backend**: two **LLM-powered features** automating data enrichment and report analysis with **multi-provider LLMs**, **BigQuery**, and **AWS Lambda/SQS/DynamoDB**.
- Built an **internal AI assistant** that turned scattered product and design documents into a **single place to ask questions**, so engineering, QA, sales, and marketing could get **source-cited answers in seconds** instead of searching files or waiting on the people who wrote them.
- Designed and built a **Salesforce-to-BigQuery sync pipeline** from scratch on **RabbitMQ** and **Redis**, supporting incremental and historical syncs with **idempotent writes** to prevent duplicate records on retries.
- **Optimized slow PostgreSQL and BigQuery queries** through query plan analysis, **lowering latency and scan costs**, and built **real-time dashboard updates** with Pusher.

Widosoft Nha Trang, Vietnam
Full-Stack Developer May 2021 – Mar 2023

- Maintained and upgraded **admin dashboard screens** for a Japanese client's **chat application** with **Laravel 7** and **jQuery throughout the two-year tenure**, alongside two in-house products, and worked on its **near real-time messaging** for end customers, implemented with **AJAX polling** against incremental message endpoints.
- Developed the admin portal for **Honrada**, the company's English learning platform, with **Vue.js**, **Node.js**, and **GraphQL (Hasura)**, and maintained its student and teacher portals (class scheduling, teacher feedback, live video lessons).
- Built the admin portal for the company's **billiards club management** product with **Vue.js** and **Node.js**, covering booking, player ranking, and multi-location management.

Skills

Backend
Typescript, Node.js, Express, Python, Laravel, NestJS, Prisma, RabbitMQ

Database
PostgreSQL, MySQL, Redis, Google BigQuery, pgvector

Frontend
Nuxt.js, Next.js, Svelte 5, Tailwind CSS

Cloud & DevOps
AWS, Docker, GitHub Actions, Vercel

AI Tools
ChatGPT, Claude, Cursor, GitHub Copilot

AI & LLM
LangChain, LangGraph, LangSmith, RAG, LLM APIs
